Chapter-5 Images, Links and Frames

Answer the following question -

Ques 1: Explain the concept of linking. Also define the types of links.

Ans - A website consists of many webpage. These web pages are linked with the help of hyperlinks. A hyper link is an underlined text or image which when clicked, leads to another location. There are 3 different kinds of links -

- i -> Internal - links on the same page.
- ii -> Local - links to another page within the same website.
- iii -> Global - links two pages on different website.

Ques 2: Explain the various attributes of tag.

Ans - is used to insert an image on the webpage. It has following attributes -

- i -> SRC - To define path or URL of the image to be inserted.
- ii -> ALT - It shows the text message if an image cannot be displayed by the browser.

- iii) Align - To display the position of an image
- iv) Height and width - To specify height, width value of image in pixels or (%) percentage
- v) Border - To add a border around an inserted image.

Ques: How are audios / videos embedded into a web page?

Ans: Audios and video are important part of multimedia. They make the image more distinctive and dynamic. In HTML5 the `<Audio>` element allows us to imbedded an audio into the web page.

The `<Video>` element allows us to imbedded videos in the web page. Both element use `<source>` to specify file.

Ques: Describe the method to align an image on web.

Ans: We can align any image on the webpage by using `align` attribute with `<img>`. This attribute take two values to display the position of an image on webpage:-

Left - to align image to the left side of page
Right - to align image to the right side of page
